

Compounding pharmacies and pharmaceutical manufacturers are held to high standards for their vials, vial seals and vial stoppers.

- Vial packaging components are critical to cGMP compliance and must be processed and documented, a task that is tedious and time consuming.
- Validated processes completed by competent personnel are required to ensure sterility and cleanliness of containers and closures
- Compounding pharmacies and pharmaceutical manufacturers can now source “ready for sterilization” vial packaging as well as pre-sterilized and nonpyrogenic “ready-to-use” vial packaging with full documented bioburden, sterility and endotoxin testing reports for cGMP compliance
- All of these components are immediately available in quantities as small as 1,000 pieces per component and are shipped worldwide – FAST!

STERILE AND READY FOR STERILIZATION
VIALS, VIAL SEALS & VIAL STOPPERS

- ✓ Ready for Sterilization Stoppers
- ✓ Sterile Vial Stoppers
- ✓ Ready to Fill Open Sterile Vials
- ✓ Sealed Sterile Vials
